

Emptying of disposable Big-Bags

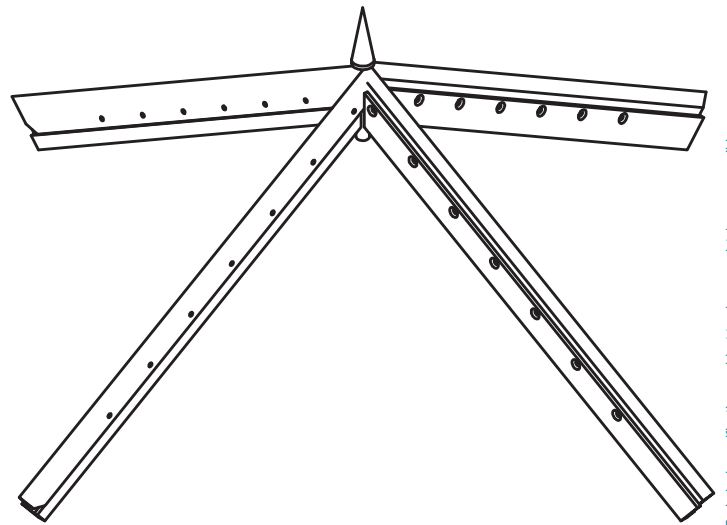

Big-Bags without outlet adapter are often used in the construction material industry, the salt and fertilizer industry and in the recycling segment. Using the cross-blade screw-connected to the Big-Bag emptying station, an automatic opening of the Big-Bag bottom through cutting is possible by lowering the bag down to the cross blade.

Exchangeable cross blade

The four sharp knife blades that seamlessly follow the robust puncture tip guarantee a clean cut. Plastic fiber shavings in the product are excluded to a large extent due to the smooth cut.

Approx. 60% of the Big-Bag bottom will be cut open. A safe emptying of the entire Big-Bag is therefore guaranteed.

- ▶ **Easy handling**
- ▶ **Blades can be exchanged easily**
- ▶ **Cross blade with stable puncture tip**
- ▶ **Blades made of wear-proof knife steel**

Technical specifications subject to change, mistakes are possible.
